

Device Reuse · Responsible Choices · Circular Electronics

E-Flip Is A Service That Helps People Give Their Old Electronic Devices Another Useful Life.

Through e-flip kiosks placed in mobile and electronics stores, people can assess old phones, tablets and accessories, understand their condition and choose to sell, donate, keep or explore refurbished options.

The app continues this journey beyond the kiosk by helping users track donated devices and discover refurbished ones. e-flip aims to shift behaviour from simply storing, discarding or replacing old electronics to considering how they can be reused and given another useful life.
