

Business Case

How e-flip turns unused and reusable devices into a circular business opportunity.

A circular retail loop, not just a collection kiosk.

Customers bring in old phones, tablets, headphones, chargers, accessories, cases and covers. The kiosk analyses the device and guides the customer toward donation, selling, keeping it, or exploring refurbished devices.

For retailers, e-flip creates additional revenue through refurbished device sales and accessories, while also supporting government-linked tax benefits.

A device stays in use longer. Value is created for the customer, retailer and circular economy.
