

Impact/ Effort Matrix

The immediate priority is to simplify the core return decision through reliable assessment, clear pathways and visible value, while more complex ecosystem features can follow later.

Low Effort

Do later

Participation limit

5 devices per person in 3 months.

Optional accessories / covers

Useful add-on, but not central to the return decision.

Accessory category expansion

Extend the kiosk beyond the core phone/tablet return flow.

Do now

Kiosk condition + functionality check

Quickly identifies whether a device can be reused.

Donate vs. sell decision

Route old + working devices to donation and functional / almost-new devices to selling.

Remaining life + impact stats

Show condition, impact and how long the device can still be used.

Low
Impact

Forget it

Full accessory marketplace

A broad accessory marketplace adds effort without driving the core return behaviour.

Complex resale features

Advanced selling tools beyond the simple kiosk decision are not essential to the first version.

Do later

Government ID + tax-benefit integration

Verify donors and connect the donation to the government benefit.

Donation outcome tracking

Let donors see where the device went, whom it helped and its impact.

Refurbished phone marketplace

Sell refurbished phones created from devices donated by other users.

Retail-store ecosystem

Connect kiosks, stores, refurbished inventory and cash / refurbished-device options.

High
Impact

High Effort
