

Sustainability Canvas: Lean UX

The Sustainability Canvas Showed The Issue Is Unused Value In Old Devices, Not Just E-Waste. E-Flip Helps Users See Device Condition, Value, And Impact Before Deciding To Keep, Sell, Donate, Or Buy Refurbished. The Kiosk Starts The Choice, And The App Makes Reuse Easy, Promoting Giving Devices Another Life.

SUSTAINABILITY CANVAS- Lean ux			
Flipit— responsible return, donation and resale of personal digital devices			
1 Business Problem What problem does it solve? People have phones, tablets, headphones, chargers, cases and other accessories that are old or no longer needed, even when they can still be reused. Our concept creates a retail-kiosk pathway where these devices can be analysed and then donated or sold instead of simply being left unused. The concept connects users, retail stores and government-linked benefits in one place.	3 Environmental Impact How does the concept affect the environment? - Keeps usable devices in circulation for longer - Creates a route for old but working devices to be reused - Creates a refurbished-phone pathway from devices given away by other people - Encourages users to consider remaining device life before selling - Supports reuse of chargers and accessories	4 Users Who are the people involved? DEVICE OWNERS People with phones, tablets, headphones, chargers or accessories that are old, working, functional or almost new. DONORS Users who choose to give away a reusable device and receive the government tax benefit. SELLERS Users who choose to sell a functional / almost-new device after seeing its condition, impact stats and remaining life. REFURBISHED BUYERS People who would like to buy a refurbished phone. RETAIL CUSTOMERS Users interacting with the kiosk inside participating stores.	5 Solutions What will solve the problem? 1. KIOSK ANALYSIS Condition and functionality check. 2. DONATION PATH Old + working reusable devices → donation → Government ID → user account → tax benefit → track outcome. 3. SELLING PATH Functional / almost-new device → impact stats + how long it will last → “Are you sure?” → sell. 4. SELLING OPTIONS Cash or refurbished option, with accessories / covers. 5. REFURBISHED MARKET Sell refurbished phones from devices other people gave away. 6. TRACEABILITY Donors can track the outcome and see whom their device helped.
2 Business Outcomes How will we know the concept is solving it? - Devices returned through the kiosk - Devices donated by users - Devices sold through the kiosk - Refurbished phones purchased - Donation outcomes tracked by users - Participation within the 5 devices / 3 months limit	6 Hypothesis Combine the problem, users, solution and impact. IF users are given a simple kiosk pathway to analyse an unused device, see its remaining value / impact, and choose donation or selling, THEN more usable devices can enter donation, resale and refurbished pathways, WITH THE INTENDED IMPACT of keeping usable devices in circulation for longer.	7 What's the most important thing we need to learn first? Identify the riskiest assumption. Will users actually choose to return a device when the kiosk asks them to donate or sell it? This is especially important because the concept depends on users bringing the device to the kiosk, completing Government ID verification, and making a conscious choice between keeping, donating or selling.	8 What's the least amount of work we need to do to learn the next most important thing? Test the most important assumption with minimal work. Show users the two main pathways: OLD + WORKING → DONATE FUNCTIONAL / ALMOST NEW → SEE IMPACT → SELL Ask what they would choose and what information makes them comfortable making that choice. Focus on the kiosk decision flow before testing the full store system.
Have we solved the problem and is the solution working?			Iteration: 01
