

How Is This Contributing To Sustainability?

The UN identifies shorter product life cycles, limited repair options, technological progress and design shortcomings among factors contributing to the growing e-waste problem. E-Waste Monitor

So instead of asking only: “How do we recycle old devices as e waste?” we should ask “How do we keep functional devices useful for longer?”

7 in 10 Indians surveyed have 2–3 unused phones at home. Six of those ten plan to sell one. Barely one or two ever do.

What we poison

Lead and mercury from burning and acid baths settle at ground level, exactly where children play and put hands in their mouths.

What we ignite

A discarded device isn't harmless. Its lithium-ion battery can be crushed in garbage and catch fire.

Real World Examples

Amazon announced that older Kindle devices would lose access to some services, like downloading the new Kindle Store content after the cutoff, even though previously downloaded books remained accessible.
