

SDG Mapping 12

Frequent upgrades and limited repair or reuse pathways increase demand for new devices, while extending the life of existing devices can reduce unnecessary consumption and waste.

Manufacturing Impact: New Devices Require Energy-Intensive Manufacturing And Raw Materials.

Upgrade Cycle: Frequent Replacement Increases Demand For New Production.

Longer Use: Repair And Reuse Can Extend The Period Of Value Extracted From An Existing Device.

Opportunity: Show Users The Environmental Consequence Of Their Choice, Not Just Its Monetary Value.
